Unknown, very similar to Mycobacterium tuberculosis MTCY20H10 9 (383 aa, E():0, 81.5% identity in 383 aa overlap) and to hypothetical proteins from SPU62616 1 Synechococcus sp. (280 aa; E(): 6.3e-26; 35.2% identity in 264 aa overlap) and SYCSLILH 102 Synechocystis sp (447 aa; E(): 1.1e-18; 29.5% identity in 400aa overlap)" /codon_start=1 /ransT_table=11	/mol_type="genomic DNA" /strain="H37Rv" /db_xref="raxon:8332" /clone="Y31" gene complement(541214) /gene="Rv0874c" CDS complement(541214)	initiation codon. Where possible we choose an initiation codon (atg, gtg, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon. FEATURES Source Jorganism="Mycobacterium tuberculosis H37Rv"	Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Web. (URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C. CANTTON: In some cases we may not have predicted the correct	MEDLINE 98295987 MEDLINE 98295987 PUBMED 9634230 REFERENCE 2 (bases 1 to 37630) AUTHORS Parkhill, J. TITLE Direct Submission Submitted (11-JUN-1998) Submitted on behalf of the Mycobacterium tuberculosis sequencing and mapping teams, Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge CB10 15A Unite de Genetique Moleculaire Bacterienne, Institut Pasteur, 28 rue du Docteur Roux, 75724 Paris Cedex 15, France E-mail: parkhill@sanger.ac.uk On Jun 27, 1998 this sequence version replaced gi:1314009. /notes_mb0914c, ., len: 882 aa. Equivalent to Rv0890c, /notes_mb0914c, ., len: 882 aa. Equivalent to Rv0890c, len: 882 aa, from Mycobacterium tuberculosis strain H37Rv, (99.9% identity in 882 aa overlap). Probable transcriptional regulatory protein, LuxR family, highly similar (but shorter 238 aa in N-terminus) to NP 302202.1|NC 002677 possible transcriptional regulator from Mycobacterium leptrae (1106 aa). Also highly similar (generally in part) to others e.g. T50568 probable multi-domain regulatory protein from Streptomyces coelicolor (1334 aa); p10957|NARL ECOLI nitrate/nitrite response regulatory protein from Escherichia coli (216 aa), FASTA scores: opt: 193, E(): 6e-06, (37.4% identity in 99 aa overlap); etc. Also highly similar to others from Mycobacterium tuberculosis e.g. MTCY02B10_22, MTV008 44, MTV036_21, and MTCY31_24. Contains p80017 ATP/GTP-binding site motif A (P-loop), P800622 Bacterial regulatory proteins, luxR family signature, and probable helix-turn helix motif from aa 836 to 857 (Score 1559, +4.50 SD).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (100.0% identity in 373 aa overlap). Probable cith (alternate gene name: glth), citrate synthase 2 (EC 4.1.3.7), highly similar to others e.g.

CAB95899.1 | AL359988 putative citrate synthase from Streptomyces coelicolor (387 aa); p39119 (ISY BACSU citrate synthase II from Bacillus subtilis (356 aa), FAST7 scores: opt: 586, E(): 5.8e-30, (33.8% identity in 367 aa overlap); etc. Also similar to Rv0896 [MTCY31.24 from Mycobacterium tuberculosis (29.2% identity in 274 aa overlap) and Rv1131. Contains PS00480 Citrate synthase signature. BELONGS TO THE CITRATE SYNTHASE FAMILY."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ILEDQRFHRLAVSTAVRARALADKAMLSTWLATSPVGATDIIAPAQQALAMAREVGDP

```
/note="Mo0916, -, len: 495 aa. Equivalent to Rv0892, len: /note="Mo0916, -, len: 495 aa, from Mycobacterium tuberculosis strain H37Rv, (100.0% identity in 495 aa overlap). Probable monoxygenase (EC 1.14.-.), highly similar to others e.g. NP 250787.1 | NC 002516 probable flavin-binding monoxygenase from Pseudomonas aeruginosa (491 aa); CAB59668.1 | AL132674 monooxygenase from Streptomyces coelicotor (519 aa); p12015 | CYMO ACIS cyclohexanone monoxygenase from Acinetobacter sp. (542 aa), FASTA scores: opt: 489, E(): 6.8e-26, (30.3% identity in 492 aa overlap); etc. Also highly similar to Rv0565c, Rv3854c, Rv383, etc from Mycobacterium tuberculosis. Has hydrophobic stretch at N-terminus."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /locus tag="Mb0915c"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly I-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1473 BP; 275 A; 414 C; 456 G; 328
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene

Coryneform bacterium that overexpresses the accDA gene. Coryneform bacteria transformed with (1) so that they overexpress the accDA gene useful in animal feeds, in human medicine and in the pharmaceutical

                                                                                                         The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and from coryneform bacterium, measuring expression amount and from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                          Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
